

Objective Protective

The game involves you, the player character, keeping various types of enemies from touching a certain "Protect Object", which is a glowing green light with a smiley face, as well as not touching certain enemies yourself. The player character appears as a green circle with two eyes facing the direction they are going. Various types of enemies will spawn, some you have to touch, and some you have to avoid. Walls will also spawn, which appear as gray squares, which the player cannot go through, but some will be fakes, which look like regular walls, but act like regular enemies but slower. Getting rid of enemies will give you points, and not letting your points go below zero for one minute will cause you to win.

The player character moves in the direction it is facing when W is pressed, and can turn using A for left and D for right. When touching enemy type 1 or 2 or a fake wall, that enemy will disappear, and the player will gain 1 point. However, if touching enemy type 3, it results in a loss of 1 point.

The Protect Object is what the player is protecting. If enemy type 1 or 2 or a fake wall touches it, it results in a loss of 1 point. The Protect Object is able to go through regular walls.

There are multiple types of enemies, which spawn in random locations not where the player or Protect object is. There can only be a maximum of 3 enemies on the screen at a time. Enemy type 1 is the most regular enemy, and is a red circle, and disappears when touching the player, and causes a game over when touching the Protect Object. Enemy type 2 is a yellow circle and will normally be moving around randomly, but sometimes will face towards the Protect Object. It disappears and grants a point when touching the player. Enemy type 3 is a purple circle and will chase the player for a few seconds before disappearing. If touching the player, it will result in a loss of 1 point. Walls will spawn in locations not where the player or Protect Object is. There can only be 3 walls (which includes walls and fake walls) at a time. Non-fake walls will block the player and enemies, but not the Protect Object. These walls switch locations every once in a while. Occasionally, though, some of these walls will be fake walls, and slowly go towards the Protect Object, when touching it, it will result in a game over, but when touching the player, the fake wall will disappear.
