

Objective Protective: How To Play

You, the player character, must get rid of certain enemies before they touch the Protect Object, the glowing green light, in order to gain points. You can move in the direction you are facing with W and turn left and right with A and D respectively. Red and Yellow enemies will disappear when touched and give you points, but if they touch the Protect Object, you will lose. Purple enemies will chase you for a certain amount of time before disappearing. If they touch you, you will lose 1 point. There will be walls in your way that the Protect Object is able to go through that you cannot, but sometimes a wall may be a fake wall, which will slowly move towards the Protect Object, and if it touches the Protect Object, you will lose 1 point. These fake walls will disappear upon touching the player character. If your point count goes negative, you lose. If you do not lose before the timer hits zero, you will win.
